New Version of Progent/Clinic's Patient Web Portal

For years, Progent/Clinic has offered you the possibility of getting closer to your patients by setting up a personalized Web portal.

Whether your website is new or already existed, the new version of Progent's Web portal is a milestone in the development of your management solution.

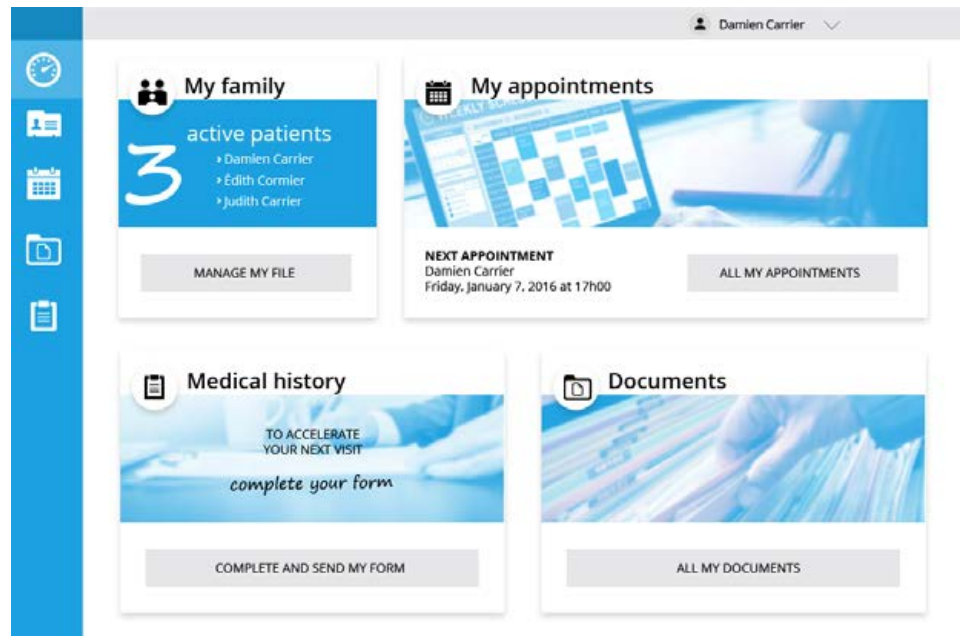

This version includes functionalities from the first version, but now allows patients to send you their *Confidential Medical-Dental Questionnaire* before their appointment and consult the documents that you make available to them on the Web: invoices, receipts, account statements and all other relevant documents.

Note that the *Confidential Medical-Dental Questionnaire* sent by patients is automatically added to their file so that they can consult it on the Web.

Fully integrated in your office's Progent solution, all patient information remains central and secure.

And if you so desire, the interface can also be personalized: logo, colour and integration with your current website.

Finally, this new patient portal was designed to receive additional services, which will appear in upcoming developments of Progent/Clinic. We should mention, for example, that patients will be able to make their appointments directly on the Web.

In a nutshell, Progent's new Web portal lets you take advantage of new Web technology tools: e-mail and text (SMS) appointment confirmation, mobile device calendar sync with Google Calendar ...

Value-added services for your patients combined with efficiency gains for your team: This is what the new Progent portal offers you. What better way to combine business with pleasure!

Rest assured that Progent's team always develops its technology with your most valuable asset in mind: your patients.
