Progident/Clinique Version 9, Full Speed Ahead!

The popular saying “You can’t hold back progress!” is particularly true when it comes to technology. The way that the Progident dental management solution has developed is proof of this.

In fact, more than 100 improvements have been made to our products. Here is an overview of the key additions to the first draft of version 9.

A more effective file search function!

One fundamental improvement made to the Progident application platform now allows for better patient file management: The interactive search function with dynamic filtering automatically produces a filtered list of patients who meet the multiple criteria you have entered.

Two examples are hyphenated names, which are increasingly popular, and searches for specific patient files.

Patient	Name	First name
000020	Beaudoin Débard	Alain-Michel
000022	Dubuc Tremblay	Alexandre-André
000019	Beaudoin Dubuc	Alexandre-Michel

Patient	Name	First name
000019	Beaudoin Dubuc	Alexandre-Michel

In our example above, you can simply enter “Dubuc” and “Michel” in their respective columns and there you have it! You find exactly who you were looking for. Result: increased productivity.

Notice the new graphical highlighting (**royal blue script**) for the selected file. This indicator can be customized (font size and colour). Result: fast finds and saved time.

Another new feature is that the patient file can now be integrated with Google Maps. Want to offer home-care service or transportation to the clinic? Click on the patient’s address to immediately view the location of their residence in Google Maps.

Appointment management is now even more sophisticated

Several major improvements (recalls, waiting list, etc.) were made to the appointment book, including some that are subtle in appearance, but extremely effective in your daily activities.

One of them is the new interface for searching for available time slots, which lets you make several appointments for the same patient in just one step.

Notice that the basic appointment-making process also lets you make “multi-resource” appointments in just one step.

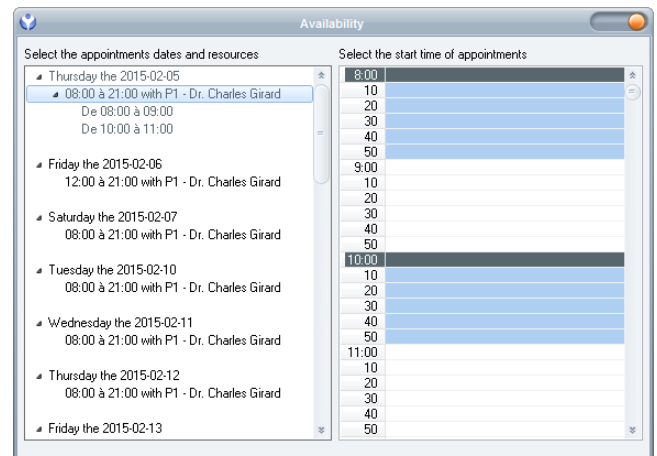

If you have a smartphone, you can now synchronize with Google Calendar to incorporate geographical contact information in the appointment slot.

Using your smartphone, you can now automatically obtain a route from an appointment in your appointment book.

More extensive SMS communications

Want to communicate more efficiently with your patients? Progident’s new “Cloud” service platform sends instant batch communications and appointment confirmations through SMS. Patients confirm their appointments by telephone, and your appointment book is automatically updated. As easy as 1, 2, 3!

Smooth management of alternative treatment plans

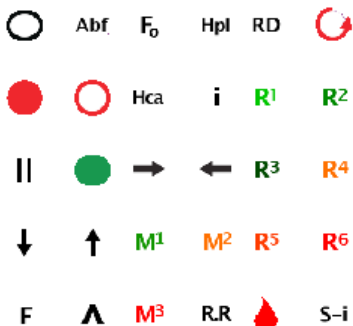

Managing alternative treatment plans is now smoother than ever. You can develop several complementary treatment plans to a basic plan right in the dental chart, print the proposed plans, and identify the plan accepted by the patient after informed consent has been obtained.

Unselected plans can be consulted at any time. Note that the "alternative plan" and "not selected plan" can also be accessed without the presence of the odontogram.

A greatly improved dental chart

The odontogram now includes a bank of symbols that can be linked to any component on the chart in the examination and diagnosis step. You select the symbol and place it on the appropriate spot (tooth, gum, root, etc.)

Remember that the chart lets you analyze the patient file as it evolves, which means that you can view your clinical notes, treatment plans, and the performed treatments in chronological order and in progression.

The dental chart also includes the "PSR" screening test, whose measurements can be directly entered on the main screen of the odontogram.

PSR :

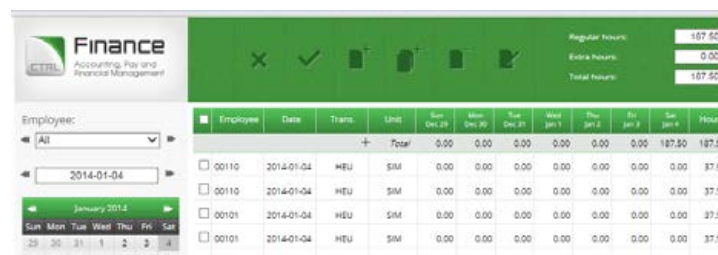

S3	S4	S5
<input type="text"/>	<input type="text"/>	<input type="text"/>
<input type="text"/>	<input type="text"/>	<input type="text"/>
S8	S7	S6

Note that the software keeps the entire history of periodontal measurements.

You can now add more text notes to several teeth at the same time in order to explain your diagnosis.

Time management in the age of the Web

Want to simplify your employees' time management by letting them execute a task whenever they are ready and from anywhere? Progident/Finance's electronic time sheet now gives you this flexibility. Their time can be very securely managed from a Web browser.

We invite you to come meet us at our stand during the Journées dentaires internationales in May 2015 to find out more about the new version 9 of Progident/Clinique and Progident/Finance.

To obtain information faster, contact a Progident specialist at 1 800 650-0143.

Progident is a service of the ACDQ!
