## Progent/Clinique V9, Even More!

Version 9 of Progent/Clinique was launched last March. Since then, key improvements have been added to this state-of-the-art version!

Please look back at the March/April issue of *The Contact Point* for more details. As a brief reminder, here are a few of the functionalities we presented in that issue:

- ▶ More efficient search for patient files thanks to dynamic new multi-criteria filtration.
- ▶ Improved integration of Google Maps, locally or on your mobile agenda.
- ▶ Interactive appointment confirmation by SMS (text message): as soon as your patient replies, your agenda is updated!
- ▶ Improved availability searches using a simplified interface for making several appointments simultaneously.
- ▶ Better integrated dynamic waiting list, in case of appointment cancellations.
- ▶ Improved reminder confirmations displays confirmation messages only when relevant.
- ▶ Alternative plan management straight from the dental chart.

- ▶ “Drag and drop” function using symbols for interactive diagnosis straight from the dental chart.
- ▶ PSR screening tool straight from the dental chart.
- ▶ Many other integrated web portal options for enhanced communication with your patients or for your internal management.

Since the launch of the first edition of version 9, strategic improvements have been made to improve the efficiency of the daily management of your clinic. These strategic improvements include:

- ▶ New visual elements (blinking, particular colours) can now be associated with an appointment’s status. A simple application of this new option is to see, from the operator, an appointment flashing when a patient has arrived in the waiting room.
- ▶ Notes associated with the operative report can now be automated by the professional in the clinical notes on the appointment card, at once combining and simplifying clinical file management in a paperless management context.

▶ The “Interface and Web Services” module now allows patients to complete their medical questionnaire online, from home, before visiting the clinic. Once completed, the questionnaire is automatically added to the patient file’s document management and it is then immediately available for consultation.

Over one hundred improvements have been made to version 9 of Progent/Clinique. You will find them in the “News Features” section of our website ([www.progent.com](http://www.progent.com)). Please visit the site to learn more about all of the new options available to you.

To obtain the information more quickly, contact a Progent consultant 1 800 650-0143.

Progent is an ACDQ service.
